

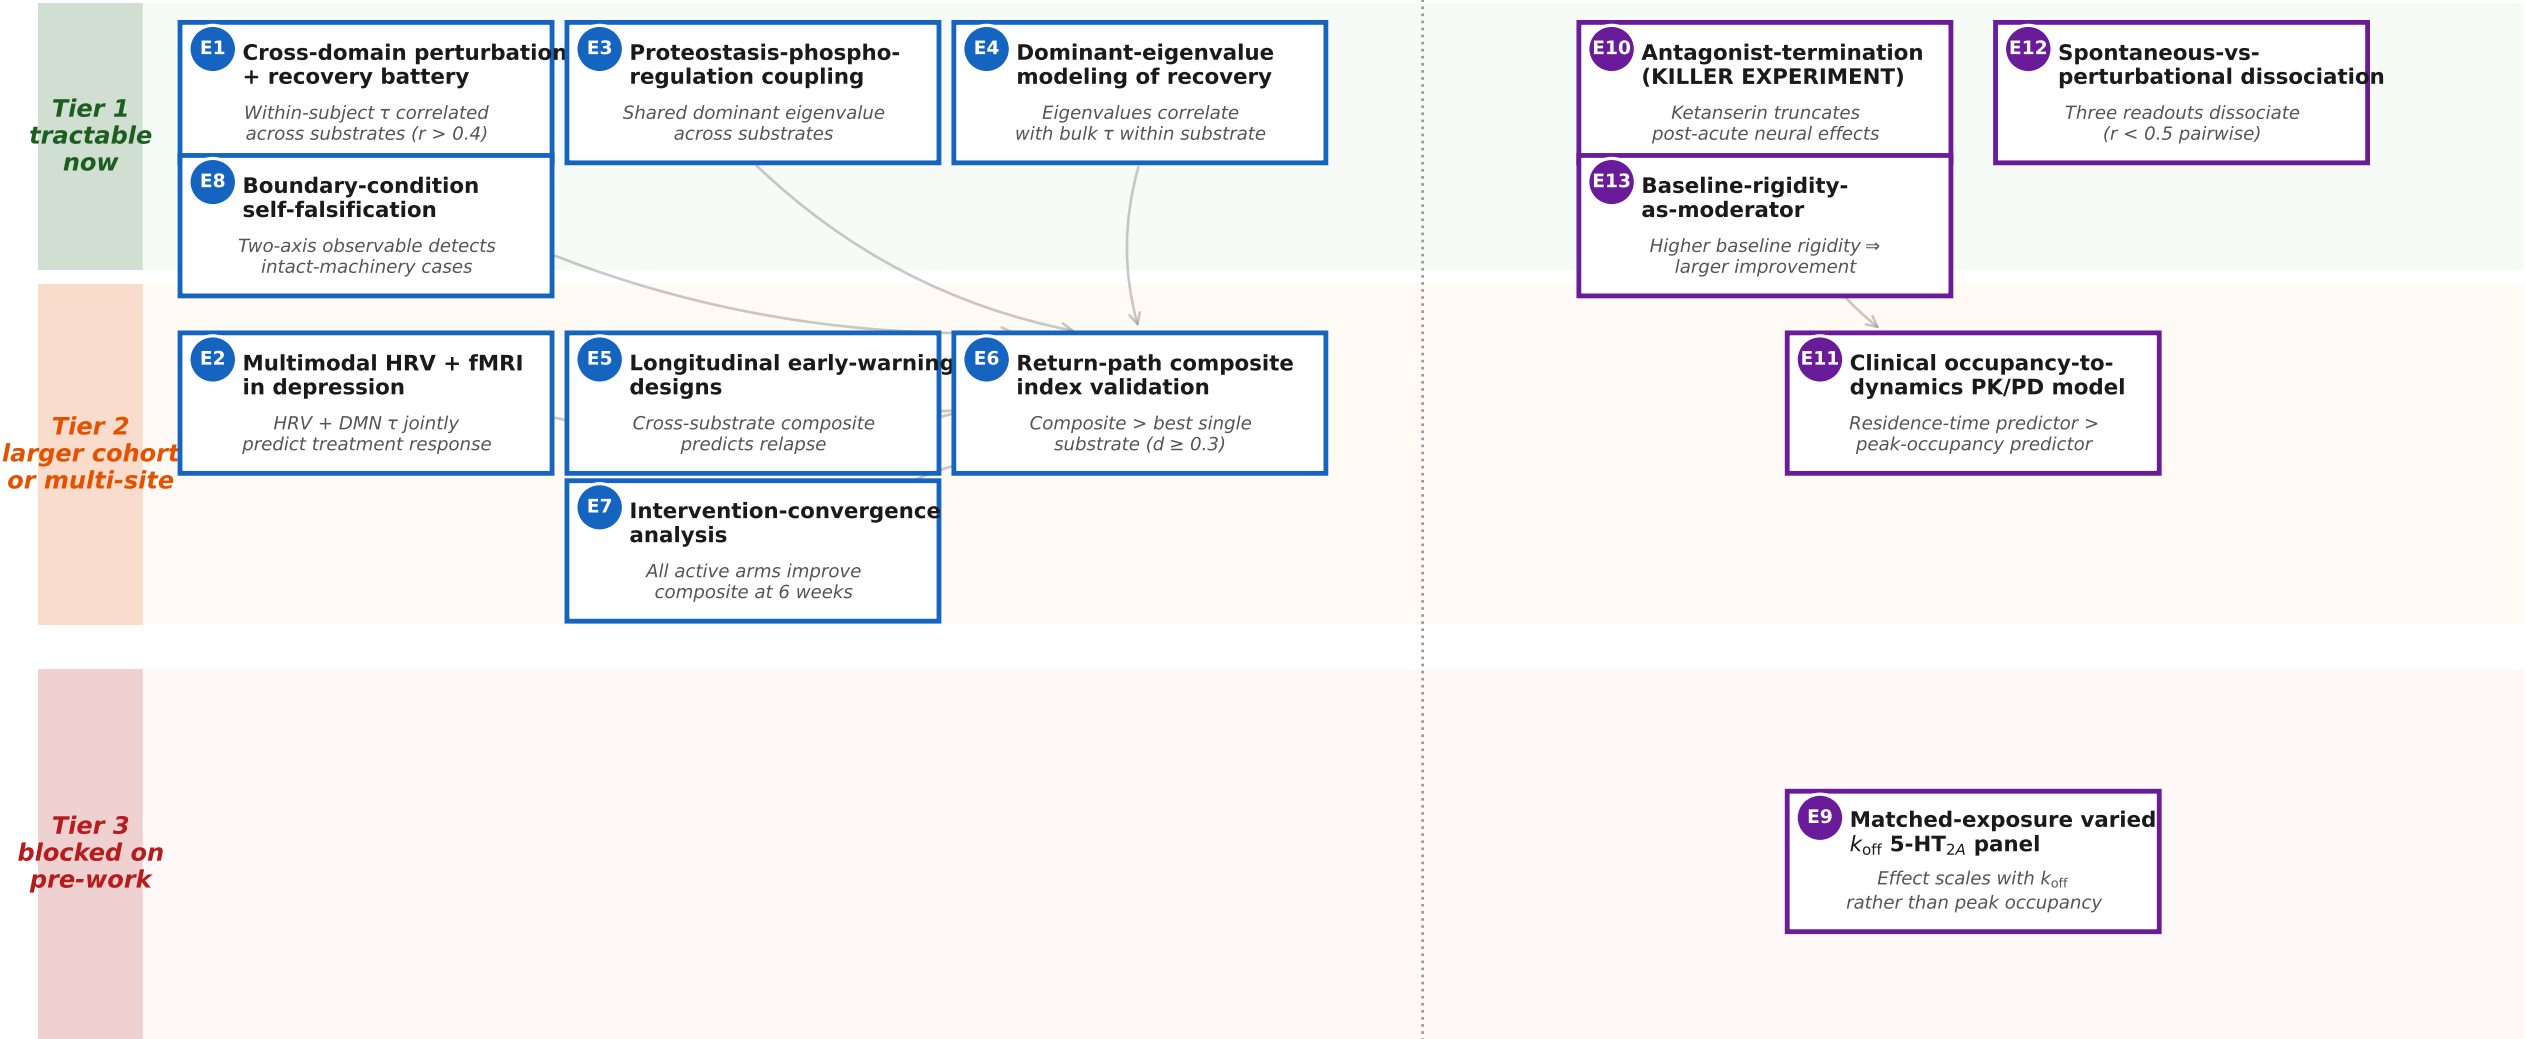

Figure 5. Cross-domain experimental agenda (§11)

Thirteen experiments organized by cluster, tractability tier, and dependency.

Cluster A — Cross-substrate recovery-kinetics

Cluster B — Pharmacology-to-psychedelics bridge

Experiments are placed in tractability bands (top = Tier 1, current technology; middle = Tier 2, larger or multi-site; bottom = Tier 3, blocked on pre-work).

Dotted arrows show experimental dependency. Experiment 10 (ketanserin antagonist-termination during psilocybin) is the killer experiment: it requires no new technology and directly tests the residence-pathology reading.
